

# VETO DOWNDRAFT BOILERS

ALA • TALKKARI

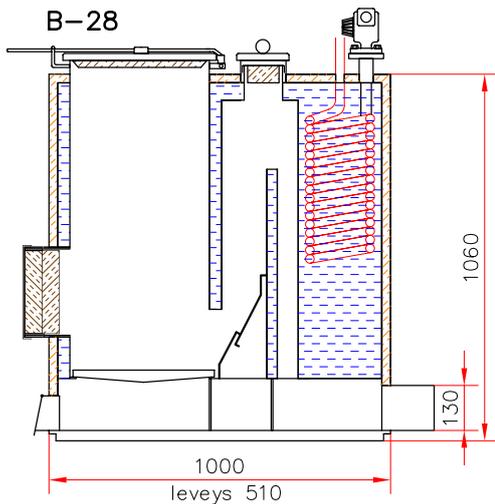

**B-28**  
**B-40**

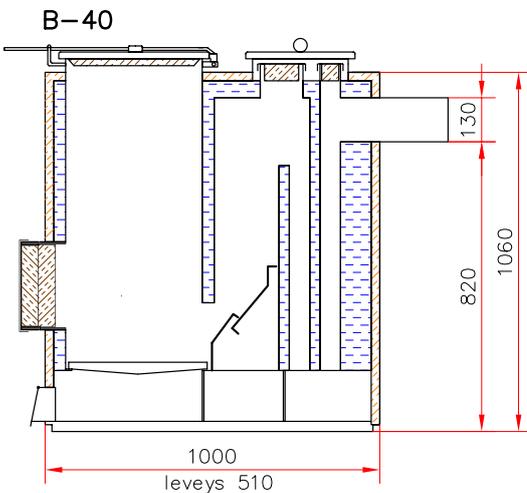

## FOR BIOMASS

# POWERFUL HEATING WITH VETO

When you are looking for a log/biomass boiler, Veto downdraft boiler is an excellent choice. Veto B-28 and B-40 are downdraft boilers with single fire trays. The storage chamber can be filled from the top. Due to the downdraft principle, the burning process can be adjusted to be very efficient. Suitable fuels are e.g. wood chips, logs and peat. Pellets can also be used in the solid fuel burner, which is available as optional equipment for Veto downdraft boilers.

Veto B-28 boiler is equipped with a DHW water coil and a mixing valve, which enable also direct heating without a water accumulator tank. The recommended accumulator tank size is 500-1500 litres. B-28 boiler is also available with an acid-resistant fire tray. The recommended chimney height is approximately 6 metres.

Veto B-40 is a boiler designed for use with a water accumulator tank. The small water volume guarantees efficient burning conditions and rapid heating up of the accumulator water. The recommended water accumulator tank size is 1000-2500 litres. The recommended chimney height is 6-8 metres.

	Dimensions			Connection for chimney		Equipment		Power kW	Weight kg	Water capacity l	Fire box	
	Length	Width	Height	Width	Height	Hot water coil	Electric resistor connection				l	Size cm
Veto B-28	1000	510	1060	230	130	yes	x	28	350	160	135	40 x 40
Veto B-40	1000	510	1060	230	130	no	x	40	380	100	135	40 x 40

x = optional equipment
